Vidyanagari , MIDC, Baramati (Pune)

Abstract:

Nowadays whole world is facing various Environmental issues. Global Warming, Pollution, Deforesting, and others. Some International and National conferences discussed on such issues and gave new programs for solving such problem, but they expected some programs from Non Government Organization, Private Institution, and Education system.

INTRODUCTION

That's why education is depending on the thinking ability of Teacher. Teacher is the base of education system. So there should be training for student-teacher. If we will provide proper training to student-teacher it would be better to inculcate environmental ethics in next generation. So education and Environment are the two sight of one coin.

ENVIRONMENT SCIENCE IN EDUCATION:

Since from ancient age men has been changing his attitude towards environment as per the need. But because of Globalization, Privatization, Urbanization, it is giving harmful effects on environment and Nature giving reaction of human activity. Due to deforesting there is no continuity in Monsoon in India, Tsunami in Indonesia, etc. so for reducing this problem there is need of maintain proper environment balance and it is possible through education. Now days government added environment science as a subject in various branches. Now it's compulsory subject in various courses.

ROLE OF TEACHER IN DEVELOPMENT OF ENVIRONMENT SCIENCE.

Depth of Environmental Issues: Teacher should take in detail knowledge of new environment issues. If he is aware about new problem he can give proper knowledge to his student. By using new technology and devices of communication he should maintain depth of Environmental issues.

Implication of Governmental program in school: Teacher should implement the governmental program, policies in school or society. Because of this reason we can directly maintain the remedies on controlling environmental damage. For example Government of Maharashtra gave plants of trees in every village which can develop the quantity of trees.

Inculcation of Environmental Values: Every teacher should try to inculcate environmental values in student. These values are important in uses of environment through student as a society member. For example 'each one plant one', watering, conservation of rare trees etc. this implication will change the psychology of every student about Environment.

Create consciousness in student about Environment: Every small activity of human being are affecting environment so teacher should give them idea about it to student time to time. Because these students are the citizens of next generation.

Arrange Programs in school: Teacher should arrange some programs in school related environment, it can give idea to student about what role of himself in the development of nature? Activity like plantation and benefits of it. Some elocution, essay writing , debate, drawing competition, all the subject of each competition should related with regarding development of Environment.

So as a teacher there are so many responsibilities of each teacher in the development of environment but it is possible in real when teacher can devoted himself in this mission. Education and Environment Science both became successful part when teacher will present himself as a bridge.
