PERSONALITY ASSESSMENT TRAITS : AN OVERVIEW

Satpal Kaur

Assistant Professor, SKR College of Physical Education, BhagooMajra ,Kharar, SAS Nagar, Punjab.

Abstract:- Allport (1937) Examined in the ballpark of fifty meaning of identity and planned the idea of identity as, the dynamic association with in the person of those psychophysical framework that focus his novel change in accordance with his surroundings. Later on he changed this definition by substituting, attributes conduct and however for extraordinary conformity to his surroundings. He went to an impressive length in hypothesizing to express that no two individuals think or carry on precisely indistinguishable. Such a perspective is significant for comprehension conduct in games.

Maddi(1970) explained the idea of identity in more complete and significant route by expressing, identity is a stable situated of qualities and propensities that focus those commonalties and contrasts in the mental behaviour(thoughts, emotions and activities) of individuals that have congruity in time and that might possibly be effortlessly seen as far as the social and natural weights of the prompt circumstance alone.

Keywords: Personality Assessmenttraits , dynamic association , psychophysical framework .

INTRODUCTION

Representative (1974) commented that identity however a profoundly vague term, which is hard to characterize, has turn into a practical and helpful idea for depicting and sorting conduct in physical movement and game. The explanation behind this is that identity in its broadest setting can be deciphered as speaking to the aggregate mental structure of the individual the way one considers, feels, acts and acts.

As identity is intelligent of the whole behavioral measurements of people, it has solid bearing on athletic inclinations as well as it has an immediate connection with games execution. Tutko and Richards (1971) had long prior distinguished various identity qualities identified with high athletic accomplishment such a drive, determination, knowledge, hostility. Authority, origination, mentor capacity, emotionality, self-assurance, mental sturdiness, obligation, trust and heart improvement.

PERSONALITYASSESSMENT

Evaluation of identity characteristic is crucial as that may contrarily or emphatically affect ones execution in any field. In our day by day lives, we are always surveying individuals' identities in a casual way. In any type of rivalry an accomplishment test., an athletic occasion, business-our system relies on upon how we assess our adversaries' capacity and how precisely we can anticipate his conduct. It is safe to say that he is relentless and cool in an emergency? Does he have a tendency to get to a great degree anxious under an unpleasant circumstance? In picking an accomplice for a business, or marriage notwithstanding for playing a diversion, we attempt to discover somebody who is perfect with us. Be that as it may, there are numerous events when a target, fair and exact evaluation of a singular's identity is greatly useful, for instance, in the determination of the players in any diversion or game.

Ordinarily it has been found that there is a distinction between the identity qualities which a man conveys

and the attributes, which he communicates. This can be unmistakably pictured in the playing circumstances in which now and again, the people give superlative exhibitions or then again neglect to express what they really have. Leaving separated alternate components (physiological, physical, and so forth.) the explanation behind the changed conduct may be ascribed to the insufficiency of the individual surveying himself in connection to the truly playing circumstance. This contends the requirement for the evaluation of the identity elements with the groups.

STUDIES PERTAINING TO PERSONALITY TRAITS

Peterson et al. (1967) made an examination of identity qualities of Olympic level female group activities and individual games competitors and watched that individual games competitors were higher in predominance, bravery, affectability, contemplation, radicalism and independence and were lower in advancement than the group activities competitors.

Gupta (1972) led study to study identity attributes of individual and group activities. The example comprised of every person (N=50) and also group activities. The subjects were administered 16PF survey (Hindi form). The consequences of the study demonstrated that both gatherings were discovered to be typical aside from on element An and Q3 where group amusement members were discovered to be fundamentally higher than the individual games members.

Singh, R. (1986) studies extroversion inner-directedness in the middle of badminton and Deaf and moronic cricket players of National Level and inferred that with in the constraints of present study it might be presume that Deaf and Dumb cricket players and badminton players of national level are outgoing person in their conduct and no noteworthy contrast was seen on the mean estimation of extroversion between these two gatherings.

Sinha, S., et al. (1989) directed Eysenck Personality Questionnaire on 50 high accomplishing and 50 low accomplishing female competitors between the age of 18-26 years of age and found that high Achieving female competitors were more outgoing person prevailing, supportive and forceful in correlation of to low accomplishing female competitors.

Bawa, G. S., et al. (1990) Studied the commitment of games to physical wellness and identity improvement and arrived at the conclusion that games adds to create general physical wellness additional ly grows such identity attributes as sturdiness self-assuredness and social boldness.

Singh (1990) considered identity attributes of top-level Indian sportsmen of people and group amusements and presumed that individual diversion players and more outgoing individual than the group amusement players. The group amusement players are less psychotic than the individual diversion players. There are no distinctions on extroversion in the middle of male and female players both on account of individual and group amusement. There is no distinction in the middle of male and female player's anxious people for the situation individual recreations. The male players of group amusements are less masochist than female players.

Bhullar (1991) thought about five gatherings of sportswomen (N=90) represent considerable authority in hockey, handball, cricket, and volleyball on identity attributes by utilizing 16 PF survey. The outcomes uncovered that hockey gathering was described by being candidly steady, confident, extreme minded, vivacious and venturesome. The handball gathering was venturesome like the hockey players.

Shergill (1991) directed a study to discover the identity distinction of fruitful and non-effective Volleyball players. 24 effective and 24 non-fruitful Volleyball players made the specimen of the study. Identity attributes were measured utilizing 16 PF (Cattell, (1970). The outcomes show that the non-fruitful players had humble nature, bunch needy, held and high state nervousness when contrasted with the effective players.

Shergill (1992) directed a study on 50 female hockey players who had taken part in India Inter-varsity hockey Championship. Cattell's 16PF was utilized to quantify the identity qualities of the players. The outcomes demonstrated that huge distinction existed between the identity of low execution gathering and superior gathering.

Yadav (1992) led an investigation of chose identity variables identified with execution in mass and class sports. The example comprised of 400 male competitors chose arbitrarily from five colleges of northwest India. The tests utilized were Cattell's 16PF poll and Sinha's (1980) Anxiety stock. Investigation of difference (2x2 factorial outline) was utilized. The outcomes showed huge contrast in the middle of mass and class sports competitors or identity variables. Essentially, critical contrasts on chose variables were found in the middle of effective and unsuccessful competitors.

Shergill H., (1993) contemplated the identity distinction between high low exhibitions. Female Hockey players and arrived at the conclusion that critical distinction existed between the identity of low execution gathering indicated high coefficients on component (.53) demonstrating candidly stable. Element E (.48) forceful, decisive, and autonomous natured; Factor H (.40) endeavor score (.21) testing nature and liberal-minded. The low execution gathering indicated high coefficient on component I (.45) or delicate minded individuals and element L (.35) or doubting suspicious and self-obstinate.

Singh, (1995) directed study in the game disipline of Basket-ball, Boxing, Football, Gymnastic, Hand-ball, Hockey, Judo, Kabaddi, Kho-Kho, Swimming, Track and field, Volley-ball, Weight-lifting and Wrestling of N.I.S Patiala and Gandhinagar, An aggregate number of 956 competitors (809 guys and 147 females) constituted the

example. The EPI was utilized to get to the variables of identity. There was huge distinction among different gatherings on every one of the variables of identity, in which boxing had largest amount of social allure and competitors were the least on this specific identity variable. On extraversion Kabaddi gathering recorded the most noteworthy score, while Boxing demonstrated the least on this variable. Hand-studs were discovered to be more masochist and the hockey players showed the least level of neuroticism among every one of the gatherings.

Ikulayo, P.B., et al. (1996) Purports the study to analyze prevailing identity characteristics of Nigerian female first class (N=60) in four games assembled into group (Soccer and hockey) and individual (games and table tennis) Sports, subjects were coordinated in age and instruction capabilities. Eysenck identity survey and cow sixteen identity component polls (16pc) were controlled. It was mesmerized that here would be huge distinction in qualities (1) between female competitors in group and individual games, and (2) between female competitors and non-competitors. Mean, standard deviations, and t-test measurable systems were utilized to break down information at 0.05 level of centrality. Contrasts were found among identity qualities of female competitors who took an interest in group and individual games. Contrasts were additionally found among the identity qualities of female competitors and non-competitors.

Schneider, I. (1996) meant to set up the distinctions in picked identity qualities in the middle of junior and senior weightlifters. Cattell's identity polls (16PF) and Stone laws demeanor survey (KRTT) were utilized. 19 competitors of senior national group and 17 competitors of junior national group in weight lifting were examined. The levels of tests qualities were set up and the identity profiles were draughted. The measurably vital contrasts between explored gatherings were not found. The elucidation of result was made as far as dairy cattle identity hypothesis and strelau disposition hypothesis.

Arai, Y., et al. (1998) studies the relationship in the middle of identity and activity recurrence taking into account 22,448 occupants to (40 to 64 years of age) in Miyagi, Japan. They finished the self-managed poll on their activity recurrence and the Japanese rendition of the short frame Eysenck Personality Questionnaire. - raised. Higher scores on Extroversion were decidedly identified with practicing and higher scores on Neuroticism and Psychoticism were absolutely identified with "not working out" in an all inclusive community for both genders. These watched connections were reliable notwithstanding when an investigation of covariance was led with controlling for conceivable jumbling variables of age, conjugal status, and training.

CONCLUSION:

Extraordinary Athletes as indicated by Arnold (1984) are known not an arrangement of identity attributes. These distinctions are because of innate hereditary qualities. Top execution and individual memoir for individual reaction identity learning is essential. A certain perfect mix of identity characteristics in relationship without standing athletic execution impacts both identity attributes and enhance psychomotor proficiently. Sports action gives a method for liberation from day by day routine and compatibility. As per Kane (1970) cooperation in games particularly in focused and lively games acquires changes out look of members and gives chance to recreation time helpfully and pleurably. For a very long while, amusements and games significant parts of games execution consider the improvement of identity is Ogilive (1971) construed that a contender being passionate solid individual, intense mindedness, less on edge, self decisive and self-assured has high ability to persevere through the anxiety of rivalry.
