Golden Research Thoughts Journal is a multidisciplinary research journal, published monthly in English, Hindi & Marathi Language. All research papers submitted to the journal will be double - blind peer reviewed referred by members of the editorial board. Readers will include investigator in universities, research institutes government and industry with research interest in the general subjects.

## Regional Editor

Manichander Thammishetty  
Ph.d Research Scholar, Faculty of Education IASE, Osmania University, Hyderabad

## International Advisory Board

Kamani Perera Regional Center For Strategic Studies, Sri Lanka	Mohammad Hailat Dept. of Mathematical Sciences, University of South Carolina Aiken	Hasan Baktir English Language and Literature Department, Kayseri

## AN EMPIRICAL STUDY ON FACTORS CAUSING ATTRITION AMONG MIDDLE LEVEL EMPLOYEES IN SOFTWARE INDUSTRY'S IN INDIA

**Aswanthta Vama<sup>1</sup> and G. Balamurugan<sup>2</sup>**<sup>1</sup>Ph.D.Research Scholar , Bharathiar University, Coimbatore.<sup>2</sup>Assistant Professor/Management Studies , Anna University, Tiruchirappalli.**Aswanthta Vama**

### ABSTRACT

Human resources represent the collective expertise, innovation, leadership, entrepreneurial and managerial skills endowed in the employees of an organization. It is an important corporate asset and the overall performance of companies depends upon the way it is put in use. This paper examines the various factors that cause attrition in Software Industry. The research design chosen for the study is descriptive. The primary data was collected through a self administered questionnaire which was originally developed for this purpose. Twenty questionnaires were distributed for the purpose of pre-testing the questionnaire's contents. Random sampling using lottery method

has been employed with the questionnaires being collected from 175 respondents. Questions asked respondents to rate their degree of agreement using a 5-point scale. The study was carried out in two software industries from Bangalore, Karnataka and only the middle level employees of those organizations were taken as respondents. Due to various reasons companies name was not disclosed in the study. An examination had been made from

the reliability of the data to check whether random error causing inconsistency and in turn lower reliability is at a manageable level or not, by running reliability test. Amongst the reliability tests that were run, the minimum value of coefficient alpha (Cronbach's alpha) obtained was 0.831. This shows that data has satisfactory internal consistency reliability. A value of Cronbach alpha above 0.5 can be used as a reasonable test of scale reliability. Using Statistical Package for Social Science the following tests were carried out 1) Factor analysis 2) Reliability Statistics. Some of the relevant findings were derived that will be significant to present Indian scenario.

---

**KEYWORDS** :Attrition, Software, Retention etc.

### **INTRODUCTION :**

Human resources represent the collective expertise, innovation, leadership, entrepreneurial and managerial skills endowed in the employees of an organization. It is an important corporate asset and the overall performance of companies depends upon the way it is put in use. Every organization is comprised of people. Acquiring their services, developing their skills, motivating them to high levels of performance, and ensuring that they maintain their commitment to the organization are essential to achieving organizational objectives. The software industry is one of the fastest growing industries of the decade. A higher growth coupled with the shortage of required manpower is posing an ultimate challenge to human resource professionals from recruitment to retention, from compensation to career planning and from technological obsolescence to labor turnover. Companies are raiding one another for human resources. With all the competing companies providing equal opportunities and benefits, it is important to know what is it that makes employees stay or leave an organization. This paper examines the various factors that influence the employees towards attrition in Software Industry.

### **REVIEW OF LITERATURE**

M Kannan and K Vivekanandan(2012) The Purpose of the Study was to investigate the turnover intentions among new entrants in software testing professionals who are working in software industry which is located in Chennai. The Samples unit [N = 135, Male = 67, Female = 68] was drawn from Software Industry. The Study investigated the Organizational Satisfaction, Job Satisfaction; Interpersonal Relationship with Supervisor's and Life Satisfaction has significant impact on Turnover Intentions among new entrants. The results were interpreted using SPSS 17.0 and the findings given for the software industry to understand perception of employees towards employers and take necessary steps to reduce the turnover intentions.

Qin Zhou suggests that low perceived organization support and low job satisfaction leads to high turnover intentions. Dawn Owen et al, conducted a study and classified into two categories to retain the talented employees such as Non-Monetary (Intrinsic) and Monetary (Extrinsic) characteristics. Jo Ellen Moore, results suggest that low affective commitment, high perceived job alternatives, and high psychological futility of voice are the primary determinants of turnover. Oksan Imamoglu et al, determines the attributes for project success or failure. The causes of failure are went overtime, went over budget, no organizational benefits and low user satisfaction. The reasons for project success are good project management and leadership, effective planning, executive and sponsor commitment, total organization and project team commitment.

### **RESEARCH QUESTION**

To find out the most influencing factor that causes attrition towards middle level employees of software Industry's in Bangalore

### **HYPOTHESIS**

There is a relationship among the factors that influence employees towards attrition.

### **METHODOLOGY**

The research design chosen for the study is descriptive. The primary data was collected through

a self administrated questionnaire which was originally developed for this purpose. Twenty questionnaires were distributed for the purpose of pre-testing the questionnaire's contents. A complete questionnaire was developed based on the comments collected during the pre-testing period. Random sampling using lottery method has been employed with the questionnaires being collected from 175 respondents. Questions asked respondents to rate their degree of agreement using a 5-point Likert scale. The study was carried out in two software industries from Bangalore, Karnataka and only the middle level employees of those organizations were taken as respondents. Due to various reasons companies name was not disclosed in the study. An examination had been made from the reliability of the data to check whether random error causing inconsistency and in turn lower reliability is at a manageable level or not, by running reliability test. Amongst the reliability tests that were run, the minimum value of coefficient alpha (Cronbach's alpha) obtained was 0.831. This shows that data has satisfactory internal consistency reliability. A value of Cronbach alpha above 0.5 can be used as a reasonable test of scale reliability. Using Statistical Package for Social Science the following tests were carried out 1) Factor analysis 2) Reliability Statistics.

#### FACTOR ANALYSIS

##### KMO and Bartlett's Test

The individual statement of factors influencing the employees towards attrition was examined using factor analysis based on 22 individual statements and the reliability of the subsequent factor structure was then tested for internal consistency of the grouping of the items

**Table 1 KMO and BARTLETT'S TEST**

Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		<b>.753</b>
Bartlett's Test of Sphericity	Approx. Chi-Square	845.006
	Df	210
	Sig.	.000

#### INFERENCE

Kaiser – Meyer – Olkin measure of sampling adequacy index is 0.753, which indicates that factor analysis is appropriate for the given data set. KMO measure of sampling adequacy is an index to examine the appropriateness of factor analysis. High values between 0.5 and 1.0 indicate factor analysis is appropriate. Values below 0.5 imply that factor analysis may not be appropriate. Bartlett's Test of Sphericity is used to examine the hypothesis that the variables are uncorrelated. It is based on Chi-Square transformation of the determinant of correlation matrix. A large value of the test statistic will favor the rejection of the null hypothesis. In turn this would indicate that factor analysis is appropriate. Bartlett's test of Sphericity Chi-square statistics is 845.006, which would mean the 22 statements are correlated and hence as concluded in KMO, factor analysis is appropriate for the given data set.

Eigen Value represents the total variance explained by each factor. Percentage of the total variance attributed to each factor. One of the popular methods used in Exploratory Factor Analysis is Principal Component Analysis, Where the total variance in the data is considered to determine the minimum number of factors that will account for maximum variance of data.

Table 2 Rotated Component Matrix (a)

	Component						
	1	2	3	4	5	6	7
I am fairly paid for the job I perform					.649		
The Organization will not openly discuss job related issues with the employees					.842		
My supervisor(s) provides performance feedback (i.e. timely & consistent basis)					.645		
The Organization does not follow standard appraisal procedure		.910					
Promotional opportunities in my job are not clear						.731	
My present job demands frequent extended working hours							.875
There is no recognition in my job			.799				
In most ways my life is close to my ambition & wishes			.650				
My supervisor(s) provides me with cross training outside of my specialization		.847					
My supervisor(s) does not treat me with respect	.785						
Workload is reasonable	.561						
The Organization gives scope for career advancements		.906					
I am having good relationship with my team members							.809
My supervisor(s) is consistent in applying the rules to all	.757						
I am fairly paid for the job I perform	.746						
I feel I have a secured job	.707						
There is stress in my job				.741			
I get sufficient knowledge from my supervisor				.556			
There is no proper interpersonal communication				.607			
My supervisor(s) accepts my ideas if they are valid			.597				
I would change almost nothing hereafter in my life	.439						

Extraction Method: Principal Component Analysis.

---

Rotation Method: Varimax with Kaiser Normalization.

a Rotation converged in 10 iterations.

Interpretation of factors is facilitated by identifying through 7 factors. Interpretation of factors is facilitated by identifying the statements that have large loading in the same factor. The factor can be interpreted in terms of the statement that loads high on it. The factors influencing the employees towards attrition comprises of 22 individual statements. Out of 22 factors, 7 individual factors contribute more towards the study

- 1.The Organization will not openly discuss job related issues with the employees.
- 2.The Organization does not follow standard appraisal procedure.
- 3.Promotional opportunities in my job are not clear
- 4.My present job demands frequent extended working hours
- 5.There is No recognition in my job.
- 6.My supervisor(s) does not treat me with respect.
- 7.There is stress in my job

### CONCLUSION

The study concludes that employee is the biggest asset for the organization. The organization has to revise the current policies for the new entrants and needs to motivate them. As well as the supervisors have to be more open minded in providing consistent performance feedback and give more opportunity for the new entrants to learn new things in the current technology in order to retain the talented young employees. Further organization need to discuss with its employees about the promotional opportunities, appraisal procedure and job related issues if any in order to retain the talented work force.
