ABSTRACT

Money edit is a yield that is become sold as opposed to for use by the rancher. A money crops is a farming yield which developed for move return benefit. The term is utilized to separate advertised yields from subsistence trim. In prior occasions money crops were normally just a little piece of a ranches add up to field, while today with the advancement of innovation and request of extravagance things the region under money edit is expanding step by step.

Present research paper investigations the territory under money crops increments in Solapur region in light of Ujani dam undertaking and Bhima-Sina stream joint trench water system venture.

Sugarcane, Banana, Oilseeds, products of the soil, sauce crops are the significant money edits in Solapur locale. The tahasils of Malshiras, Pandharpur, Madha, Mohol, Barshi, North Solapur and South Solapur have increments in region under money crops amid the period 1993-2003 to 2003-2013 .

KEY WORD: Cash crops, water system venture.

INTRODUCTION

India's the majority of the part goes under dry season inclined zone so there is a need of water system asset. Storm is the foundation of Indian economy. Be that as it may, more often than not Monsoon is uneven and less in a few sections of the Indian locale, so in the district of Rajasthan, Western piece of Madhya Pradesh, Middle piece of Maharashtra state and western piece of Andhra Pradesh state. So there is need of fake water system assets. In India there is parcel of River connect venture and waterway development is finished and some are working in process. Solapur region is likewise gone under dry season inclined locale so there is need of fake water system assets. In Solapur area Ujani dam is real water system assets. The Bhima-Sina stream joint channel is likewise essential water system venture in Solapur area.

Money trim is a yield that is become sold instead of for use by the rancher (Merriam Webster Dictionary). A money crops is a horticulture trim which developed for move return benefit. The term is utilized to separate advertised harvests from subsistence edit (Wikipedia, the free reference book). In prior occasions money crops were generally just a little piece of a homesteads add up to field, while today with the improvement of innovation and request of extravagance things the region under money trim is expanding step by step.

Region under money edit is the one of the vital pointer of financial improvement of country territory. Manor crops like Sugarcane, Banana, Oilseeds, Fiber crops like cotton, jute, tea, espresso, elastic,

tobacco are known as money crops. Such harvests are not created for family utilization but rather these are developed to move showcase reason. These yields are developed either in high precipitation district or in satisfactory or changeless water system locale. (Ranjit Thirtha, 2002.) Sugarcane, Banana, Oilseeds, foods grown from the ground, topping yields are the real money edits in Solapur region.

INFORMATION ACCUMULATION AND METHODOLOGY:

The proposed research work subject to both basic and helper data. Fieldworks and field observation in the midst of field visits and meeting of agriculturists in context of water openness coordinated. Helper wellsprings of data don't see the genuine and complete picture of all segments required for the examination. The discretionary data is accumulated from District Gazetteers, Socio-Economic Review of Solapur locale, and Irrigation Department Reports, area and state water framework and metrological reports, ground water diagram reports, list, etc. The data gathering period is 20 years i.e. 1993 to 2003 and 2003 to 2013.

AREA UNDER CASH CROPS DURING 2003-2013:

Amid the time of 2003-2013 there is 29.91 percent territory under money trim in Solapur locale, that of state is 19.85, however spatial dissemination fluctuates from tahsil to tahsil running in the middle of 18.27 percent and 37.52 percent. The high region under money trim is recorded in Pandharpur, Karmala, Madha, Mohol, Barshi, Akkalkot and Malshiras tahsil because of the improvement of lasting surface water system offices of Ujani real water system task and Bhima-Sina River joint waterway water system venture larger part of ranchers incline toward sugarcane, Banana, foods grown from the ground and oil seeds development.

Figure 2 B shows that the moderate zone under money trim is recorded in the tahsil of North Solapur, South Solapur and Mangalwedha tahsils going from 18.27 to 29.30 percent, while it is low in Sangola tahsil for the most part since they are denied from enduring water system offices.

CHANGE IN THE REGION UNDER CASH EDIT 1993-03 TO 2003-13:

Amid the time of examination locale in general have 13.35 percent positive change in zone under money edit. The positive changes are seen in each tahsil however the spatial dispersion differs from tahsil to tahsil. Figure 2 C demonstrates that the most noteworthy positive change are seen in Pandharpur, Mohol, Akkalkot, Barshi and Karmala tahsil principally because of the advancement of surface water system offices due to Ujani water system venture. The Moderate changes are seen in the tahsil of Madha, Malshiras, North Solapur, Mangalwedha and South Solapur. The low positive change is seen in Sangola tahsil. It is low in Sangola because of lower advancement of surface water system offices.

CONCLUSION:

The Ujani dam water system venture and Bhima-Sina waterway joint channel water system venture affected on trimming example of study area. Amid the investigation time frame the region under money crops increments in the Malshiras, Pandharpur, Madha, Mohol, North Solapur and South Solapur tahsils because of the Ujani dam undertaking and Bhima-Sina waterway joint channel water system venture in Solapur locale.
