ABSTRACT:

Death is inevitable and the satisfaction with one's own life is the matter that all strive for. Thoughts or feelings associated with one's own or others death can create depression symptoms that may affect one's life satisfaction. The objectives of the study were to find out whether there exists any significant correlation between death depression and life satisfaction.

Abstract Report: The Title Accurately Said The Study was About.

INTRODUCTION:

Late adulthood or old age being the closing period of lifespan creates lots of physical and psychosocial changes in the individual. Late-life events such as chronic and debilitating medical disorders, loss of friends and loved ones and the inability to take part in once-cherished activities can take a heavy toll on an aging person's emotional well-being.

Introduction Report: This Article Include Full Introduction, Methods, Results & Introduction Section.

METHODS & MATERIALS:

The plan and procedure for the investigation is presented under various headings.
Sample

The sample consisted of 120 aged individuals (56 males and 64 females) of age ranging from 65 to 85, from the district of Thiruvananthapuram, Kerala, India.

Methods & Materials Report: Tables/Boxes/Diagram & Images are Used to Explain Specific Points or Background Information. Figures That The Plotted Parameters are Clearly Mentioned.

RESULT:

The data collected were subjected to different statistical analyses and the results obtained are discussed here. In order to find out whether there exists a significant correlation between the person's level of death depression, and life satisfaction, the technique of Pearson Correlation Coefficient was used. The results are shown in table 1.
(Insert Table 1 about here)

Result Report: Figures are Imported to Provide Explanation for Background Information. Conclusion of This Paper Clearly Supported Results.

CONCLUSION:

The following conclusions were drawn from the findings of the study:

1. There is significant negative relation between death depression and life satisfaction.
2. Females had high level of death depression than males.
3. Old people who are ill have high level of death depression.
4. High level of death depression was found in people who reside in old age home or alone than those who stays in family..

Conclusion Report: The Text is Rounded off with a Conclusion that Discusses the Implication of The Findings & Ideas Discussed & Their Impact on Future Research Direction.
