How to Write Articles-

Here are a few basic steps to take to craft an interesting, informative article.

Method 1 of 3: Come Up With An Idea

1. Get to know your audience. Decide who you need to write for before proceeding with planning or writing an article. Identify the needs of your readership. What do your readers need to know? How does your own knowledge matchup against the information they need? This will be the easiest way for you to find a topic to write about
2. Be unique. If you are writing an article about something that other people are also writing about, try to be unique in how you approach the material
3. Be passionate. You should care about the topic you choose to write about. Your enthusiasm will show in your writing and it will be much more engaging for your readers

Method 2 of 3: Research Your Idea

1. Learn the basics. Get the general explanation of whatever you are trying to write about. This will give you a basic framework for what to look for as you research.
2. Find reliable sources. Now that you know what to look for, research your topic. You can use the internet, a library, conduct interviews, watch documentaries, or whatever you feel is appropriate to teach you everything you need to know about your topic. Be an expert!
3. Get different types of material. During your research, look for material that isn't text. This can be used or altered to add to your article.

Method 3 of 3: Write Your Article

1. Decide your length. Does this article have a word count? Do you need to fill a certain number of pages? Consider what type of content you're writing about and how much space that can fill, as well as how much needs to be written in order to cover the topic adequately, before proceeding with writing your article.
2. Outline your article. Before you begin formal writing, you will want to outline your article.
3. Edit your work. Before you submit your work, you will want to do some editing and revision. If time allows, wait for a day or two before editing
4. Respect the rights of other writers. If you are using information from an external source, be sure to cite the source at the bottom of the article.
5. Submit your work. When you've finished, submit your work in the appropriate manner.

ABSTRACT:

Generally the land use pattern indicates the way in which the land area used under various circumstances. The pattern of land use of a country at any particular time is determined by the combination of economic and institutional framework. Hence, the land use pattern and the trends during years will help to suggest the scope for planned shift in the pattern. The analysis regarding trend of land use in India during the period 1990-91 to 2010-11 are as follows.

Abstract Report: The Title Accurately Said The Study was About.

INTRODUCTION:

Land is an important natural resource that embraces the elements like the overlying temperature, moisture, topography, soil matrix and physical structure. It is certainly a manifestation of the past and present human activities. But land has the characteristics of its fixity in supply and scarcity. Therefore land use pattern is directly concerned with the problem arising in the process of deciding upon and carrying out into action the optimum use. In a dynamic world, certain modification can occur in the existing pattern of land utilization (Lekhi R.K. & Jogin-dre Singh, 2011). The integrated use and management of land, water and vegetation are essential for human life. During three to four decades after independence, the fast growing population and chronic scarcity of food led to extension of area under cultivation including denudation of forests bringing more areas under irrigation either through surface or ground water, application of chemical fertilizers and pesticides a large scale and introduction of new varieties which demanded more of them.

Introduction Report: This Article Include Full Introduction, Methods, Results & Introduction Section.

METHODS & MATERIALS:

Must add methods and materials in your article.

Methods & Materials Report: Methods and materials reports are blank.

RESULT:

Must add result in your article.

Result Report: Result reports is blank.

CONCLUSION:

The secondary data analysis clearly projects the comparison of growth rate and ratio of net area sown and horticultural area in India and Karnataka. The area of horticulture has been significantly increased when compared with that of the net area sown in India as well as in Karnataka. The net area sown has been increased in Karnataka significantly higher than India and the horticulture area has been increased in India significantly higher than Karnataka. The ratio of horticultural area to net area sown is more in Karnataka compare to India.

Conclusion Report: The Text is Rounded off with a Conclusion that Discusses the Implication of The Findings & Ideas Discussed & Their Impact on Future Research Direction.
