## ABSTRACT:

The present study makes an attempt to understand the stress perceived by the primary caretakers attending to children with cardiac problems. Caretakers who were ready and willing to extend their cooperation for in depth interview were selected as population for the study.

**Abstract Report:** The Title Accurately Said The Study was About.

## INTRODUCTION:

Becoming a parent, is one of the most powerful of the human experiences, is often accompanied with feelings of celebration and relief, but it can also be a time of anxiety, and stress.

**Introduction Report:** This Article Include Full Introduction, Methods, Results & Introduction Section.

## METHODS & MATERIALS:

A total number of 60 caretakers who were ready and willing to extend their cooperation for in depth interview were selected as population for the present study. The sample was limited to Primary care takers for two reasons..

**Methods & Materials Report:** Tables/Boxes/Diagram & Images are Used to Explain Specific Points or Background Information. Figures That The Plotted Parameters are Clearly Mentioned.

## RESULT:

Must add result in your article.

**Result Report:** Results are as per aims and objective and useful to further research .

## DISCUSSION:

Caretaker's general profile: Includes variables such as age, gender, education, occupation, religion, relationship with the patient, marital status, family type and family income.

**Discussion Report:** The Text is Rounded off with a Conclusion that Discusses the Implication of The Findings & Ideas Discussed & Their Impact on Future Research Direction.
