ABSTRACT:

Acquired immunodeficiency syndrome (AIDS) was first diagnosed in the United States (US) in 1981; over 90% of all infected cases occur in developing countries and the number of cases is increasing every year. AIDS can provoke irrational emotions and fears in health care and had called for a national response in terms of both HIV prevention and care.

Abstract Report: The Title Accurately Said The Study was About.

INTRODUCTION:

The World Health Organization’s report on the role of HIV-related medical education in the South Asia region has also underscored the importance of including training in sensitivity, communication skills, and the development of compassionate attitudes toward HIV infected patients in the medical curricula.

Introduction Report: This Article Include Full Introduction, Methods, Results & Introduction Section.

METHODS & MATERIALS:

In this present cross-sectional study, the newly admitted students of the Medical College were enrolled as study subjects. The students were of first semester of three consecutive year’s i.e., of In every year 100 students were admitted in the first year. The students not present on the day of data collection were excluded from the study. Therefore, the total numbers of students enrolled in the study were 257 the study is conducted in karnataka state.

Methods & Materials Report: Tables/Boxes/Diagram & Images are Used to Explain Specific Points or Background Information. Figures That The Plotted Parameters are Clearly Mentioned.

RESULT:

All the students who were present on the day of data collection were included in our study and have completed the questionnaire. The mean age of the study population was 18.5 (range 17 – 21 years). In our study, it was observed that all the students have heard the name of HIV/AIDS and they have correct knowledge of the causative agent i.e; disease is caused by a virus name Human Immunodeficiency Virus.

Result Report: Figures are Imported to Provide Explanation for Background Information. Conclusion of This Paper Clearly Supported Results.

DISCUSSION:

People living with HIV in India often experience discrimination while receiving health care. Inadequate knowledge and fear of HIV infected people have been identified as a serious problem among health care professionals considering themselves to be at risk of contracting the infection in India.

Discussion Report: The Text is Rounded off with a Conclusion that Discusses the Implication of The Findings & Ideas Discussed & Their Impact on Future Research Direction.
