Introduction

Level of A-State should be high in circumstances that are perceived by an individual to be, treating irrespective of the objective danger. A state intensity should be low in non stressed situations or in circumstances in which an existing danger is not perceived as threatening.

A Good Introduction :-

Give a method of reasoning. State your particular hypothesis(es) or objective(s), and depict the thinking that drove you to choose them. Extremely briefly depict the exploratory configuration and how it achieved the expressed destinations.

Materials

Problem: To study the death anxiety and locus of control among the HIV/ AIDS patients.

A Good Materials :-

Depict materials independently just if the study is complicated to the point that it spares space thusly. Incorporate specific chemicals, organic materials, and any gear or supplies that are not generally found in research centers.

Result

The mean and SD value of female HIV/ AIDS patients is 14.76 and 2.95 respectively. This results shows that male HIV/ AIDS patients have external locus of control than the female.

A Good Result :-

Abridge your discoveries in content and show them, if fitting, with figures and tables. In content, depict each of your outcomes, guiding the per user toward perceptions that are generally significant.

Conclusion

1. Male is internal locus of control
2. Female is external locus of control
3. Female have more death anxiety than male
4. Male have less death anxiety than female

A Good Conclusion :-

Choose if the trial outline satisfactorily tended to the speculation, and whether it was legitimately controlled. Attempt to offer option clarifications if sensible options exist.

References

- Bausal (1971) studied the adjustment of HIV +ve patient were found to be significantly better adjusted in the area of home, society and social and emotional adjustment.
- Mohanthy (1980) : Found that socio-cultural HIV +ve Patients had higher anxiety and poor adjustment than HIV +ve patients. HIV female showed better adjusted in health, emotional and social areas, where as females were better adjusted home.

REVIEWER COMMENTS

- The work, as with all work advancing from this specific gathering, is generally sound.
- My remarks here are concerned singularly with the association of the composition.
- Thought of these focuses will, I accept, lead to an enhanced report that better shows the key ideas and conclusions.
