ABSTRACT

The purpose of the study was to assess and compare of sport aggression among athletes of contact, non contact and semi contact sports. Subjects and Methods: For this study ninety athletes was randomly selected from different levels and sports of contact, non contact and semi contact. The age of the subjects was ranging from 16 to 30 years. The sport aggression was taken as independent variable. The sport aggression of the participants was measured by Anand Kumar & Prem Shanker Shukla (1988)

Introduction

The path of Science and technology innovation have undergone a remarkable change during the past couple of decades which has caused the growth of science-based industries, such as biotechnology, information technology, space technology etc.

A Good Introduction :-

Depict the significance (importance) of the study - why was this value doing in any case? Give a wide connection. Extremely briefly depict the exploratory configuration and how it achieved the expressed destinations.

Materials

For the purpose of the study ninety (N =90) athletes was randomly selected from different levels and sports of contact, non-contact and semi contact sports. All participants categorized into three groups, contact (30), non-contact (30) and semi-contact (30) athletes and the level of participation of athletes is national level.

A Good Materials :-

Materials may be accounted for in a different passage or else they may be distinguished alongside your systems. In biosciences we habitually work with arrangements - allude to them by name and portray totally, including convergences of all reagents, and pH of watery arrangements, dissolvable if non-fluid.

Result

Must add result in your article.

A Good Result :-

Results are as per aims and objective and useful to further research .

Conclusion

It is concluded that significant difference exists among athletes of Contact, Non Contact and Semi Contact sports in relation to Sport Aggression. As compared to Non contact and semi Contact athletes, Contact athletes have higher mean value on Sport Aggression.

A Good Conclusion :-

You may propose future headings, for example, how the analysis may be adjusted to achieve an alternate target. Clarify the majority of your perceptions however much as could be expected, concentrating on systems.

REVIEWER COMMENTS

- Thought of these focuses will, I accept, lead to an enhanced report that better shows the key ideas and conclusions.
- Generally, this is a reasonable, brief, and elegantly composed original copy.
- The presentation is pertinent and hypothesis based.
- Sufficient data about the past study discoveries is displayed for perusers to take after the present study method of reasoning and strategies.
