ABSTRACT

The Kolhapur District is agriculturally well developed district in south Maharashtra. Each and every cropping pattern mostly influenced by physical socio-economic factors and pedological conditions. Each crop has maximum, minimum, and optimum temperature. The study of cropping pattern constitutes an important aspect of agricultural geography and it help in the planning and development of the region. The cropping pattern varies from region to region. The perception and assessment of environment also guide to grow certain crops in a region.

Introduction

Cropping pattern is the proportion of area under various crops at a point of time as it changes over space and time. The cropping pattern refers to the system of general crop growing practices in various cropping seasons of a year in any region. (Jadhav S. 2008).

A Good Introduction :-

Depict the significance (importance) of the study - why was this value doing in any case? Give a wide connection. Extremely briefly depict the exploratory configuration and how it achieved the expressed destinations.

Materials

The work is totally based on secondary data. The data collected from socio-economic abstract of Kolhapur district and department of agriculture development, Zillah parishad, Kolhapur. The relevant information and mapped using suitable techniques and methods.

A Good Materials :-

Materials may be accounted for in a different passage or else they may be distinguished alongside your systems. In biosciences we habitually work with arrangements - allude to them by name and portray totally, including convergences of all reagents, and pH of watery arrangements, dissolvable if non-fluid.

Result

It is found that, the Index Values of crop concentration is mostly Low and Moderate category. In Kolhapur district Shahuwadi, Panhala, Hatkanangle, Shirol, Karveer, Kagal, Bhudargad, Radhanagari, Gaganbavda, Ajara, Gadhinglaj and Chandgad tahsil has found Low to very high Index of crop concentration.

A Good Result :-

In content, depict each of your outcomes, guiding the per user toward perceptions that are generally significant. Give a setting, for example, by depicting the inquiry that was tended to by mentioning a specific observable fact.

Conclusion

The present research paper highlighted that, cropping pattern of agriculture in Kolhapur district is varies from space to space. We have observed that, the cropping pattern in Kolhapur district is diversified because of various reasons and get maximum return from agricultural commodities.

A Good Conclusion :-

Choose if the trial outline satisfactorily tended to the speculation, and whether it was legitimately controlled. Attempt to offer option clarifications if sensible options exist.

REVIEWER COMMENTS

- The work, as with all work advancing from this specific gathering, is generally sound.
- My remarks here are concerned singularly with the association of the composition.
- Thought of these focuses will, I accept, lead to an enhanced report that better shows the key ideas and conclusions.
- Generally, this is a reasonable, brief, and elegantly composed original
