#### ABSTRACT

The objective of the present study is to compare personality disorders between obese and normal weight teenage boys. For present study, 100 obese teenage boys (Ave. age 17.22 yrs) and 100 normal weight teenage boys (Ave. age 17.89 yrs) from various govt. and private schools/junior colleges operational in and around Nagpur city were selected to serve as sample. WHO (1995) classification for Body Mass Index was used to identify obese and normal weight teenage boys. Jodhpur Multiphasic Personality Inventory prepared by Joshi and Malik (1981)

## GOLDEN RESEARCH THOUGHTS

### Introduction

A young person whose age is between 13 to 19 years is considered as teenager. Since the age number ends with teen, they are referred to as teenagers. Apart from biological changes of puberty, teenagers also experience cognitive changes which increases their ability to think abstractly.

#### A Good Introduction :-

*Depict the significance (importance) of the study - why was this value doing in any case? Give a wide connection. Extremely briefly depict the exploratory configuration and how it achieved the expressed destinations.*

### Materials

The following methodological steps were taken while conducting the present research work.

#### A Good Materials :-

*Materials may be accounted for in a different passage or else they may be distinguished alongside your systems. In biosciences we habitually work with arrangements - allude to them by name and portray totally, including convergences of all reagents, and pH of watery arrangements, dissolvable if non-fluid.*

### Result

A perusal of table 1 statistically suggest that teenage obese boys were more anxious ( $t=6.15, p<.01$ ), showed more magnitude of depression ( $t=3.11, p<.01$ ), and exhibited higher degree of obsessive-compulsive reaction ( $t= 3.58, p<.01$ )

#### A Good Result :-

*Abridge your discoveries in content and show them, if fitting, with figures and tables. In content, depict each of your outcomes, guiding the per user toward perceptions that are generally significant.*

### Conclusion

It was concluded that, development of personality disorders in teenage boys are somewhat associated with obesity with some other factors also contributing in it.

#### A Good Conclusion :-

*Clarify the majority of your perceptions however much as could be expected, concentrating on systems. Choose if the trial outline satisfactorily tended to the speculation, and whether it was legitimately controlled.*

### REVIEWER COMMENTS

- This was a superb give an account of extremely intensive examination.
- The writing audit was careful, the approach was carefully exhaustive and fused the utilization of sufficient quantities of tests in dust size examination and blast tests.
- I discover no shortcoming at all with the routines, information examination, or conclusions.
