ABSTRACT:

Objective of the study was to search locus of control and self esteem among boys and girls college students. Hypothesis: Boys college students will be high Locus of Control (External Locus of Control) than girls' college's students. Second hypothesis: there will be significant difference between boys and girls college students on dimension self esteem.

Abstract Report: The Title Accurately Said The Study was About.

INTRODUCTION:

Rotter (1954; Rotter, Chance, and Phares 1972) suggested that people generally identify either an internal or external locus of control in their lives. Those with an internal locus of control tend to believe in their own ability to control events, whereas people with an external locus of control believe other people or Events determine their own circumstances.

Introduction Report: This Article Include Full Introduction, Methods, Results & Introduction Section.

METHODS & MATERIALS:

Locus of Control Scale and self esteem inventory administered individuals as well as a small group. While collecting the data for the study the later approaches was adopted. The subjects were called in a small group of 20 to 25 subjects and there seating arrangements was made in a classroom. Prior to administration of test, through informal talk appropriate rapport form.

Methods & Materials Report: The author used a technique from published study, he included a citation.

RESULT:

Must add the result to your article.

Result Report: Result is blank.

DISCUSSION

Second mean of self esteem score of the boys' college students was 92.70 and girls' college students score was 81.53 Boys and girls college students mean was highly significant t value 8.74 (78) and both levels were significant as well as null research hypothesis was reject and alternative hypothesis was accepted boys college students have significantly high locus of control than the girls college students.

Discussion Report: Our goal is to help the author improve this and future manuscripts.
