## ABSTRACT:

Present cross sectional study was done to find out the psychiatric problems in elderly persons living in urban area. Elderly are prone for various types of psychosomatic disorders due to inherent and environmental factors. Common psychiatric illnesses found in geriatric age group in this study are depression, adjustment disorders, anxiety disorders & panic disorders etc. High prevalence in geriatric patients needs special attention to improve their overall health statuses.

Abstract Report: The Title Accurately Said The Study was About.

## INTRODUCTION:

Life expectancy has been increasing leading to increase in geriatric population throughout the world. As the person becomes older he/she becomes more prone to develop various disorders due to continuous changes occurring within the body. Moreover, elderly become less productive in terms of monetary-earnings, thus become prone to be neglected by the family.

Introduction Report: This Article Include Full Introduction, Methods, Results & Introduction Section.

## METHODS & MATERIALS:

Study was short durational (of 2 months) and cross sectional. 10 physicians from various parts of the city were selected for the study. All these physicians were catering mainly the urban population. Elderly patients (>60 yrs of age) coming to physician for any reason were requested to give the responses for 'self made questionnaire with 20 points'. Before asking questions, consents from patients were taken.

Methods & Materials Report: Tables/Boxes/Diagram & Images are Used to Explain Specific Points or Background Information. Figures That The Plotted Parameters are Clearly Mentioned.

## RESULT:

Table 1. Age wise distribution of psychiatric disorders

Table 2. Gender-wise distribution of psychiatric disorders

Table 3. Prevalence of psychiatric disorders in different socio-economic groups

Result Report: Figures are Imported to Provide Explanation for Background Information. Conclusion of This Paper Clearly Supported Results.

## CONCLUSION:

Present study further emphasizes that elderly are not only at risk of somatic illnesses due to natural ageing process but also they have increased risk for development of psychiatric illnesses due to associated circumstances. As the person becomes old, his/her physiologic processes become limited and usually the person harbors multiple co-existing illnesses including cardiovascular, rheumatic and neurologic diseases.

Conclusion Report: The Text is Rounded off with a Conclusion that Discusses the Implication of The Findings & Ideas Discussed & Their Impact on Future Research Direction.
