ABSTRACT

Urban corridors is a linear ribbon system of urban organization in which cities of various sizes linked through transportation and economic axes, often running between major cities. Present work, intends to measure the impact of corridor development on regional economy, has been carried out in Kolkata-Dhanbad urban corridor connected by NH2 and eastern railway which act as a major pivot for the development of the whole region and attributed to emergence and evolution of a distinct spatial pattern and urban morphologies.

Introduction

Urban corridors include many of the major roadways that pass through urban areas. It can be defined as a linear 'ribbon' system of urban organization in which cities of various sizes linked through transportation and economic axes, often running between major cities.

A Good Introduction :-

Depict the significance (importance) of the study - why was this value doing in any case? Give a wide connection. Extremely briefly depict the exploratory configuration and how it achieved the expressed destinations.

Materials

For the purposes of this study a corridor typology was constructed, where different corridor segments were classified on the basis of their land use, density, and transit characteristics.

A Good Materials :-

Materials may be accounted for in a different passage or else they may be distinguished alongside your systems. In biosciences we habitually work with arrangements - allude to them by name and portray totally, including convergences of all reagents, and pH of watery arrangements, dissolvable if non-fluid.

Result

To start with, the region comprises of three CD block namely Andal, Faridpur-Durgapur and Kanksa which composes of 15 gram panchayet that can be further segmented into 78 villages. To elaborate Andal have 8 GP composed of 25 villages, Kanksa with 5 GP composed of 36 villages.

A Good Result :-

Abridge your discoveries in content and show them, if fitting, with figures and tables. In content, depict each of your outcomes, guiding the per user toward perceptions that are generally significant.

Conclusion

Urban corridors spark business and change the nature and function of individual towns and cities, promoting regional economic growth but also often reinforcing urban primacy and unbalanced regional development. In the study area concerned emergence of the corridor and metamorphosis of settlements are interlinked and depends on each other.

A Good Conclusion :-

Choose if the trial outline satisfactorily tended to the speculation, and whether it was legitimately controlled. Attempt to offer option clarifications if sensible options exist.

REVIEWER COMMENTS

- My remarks here are concerned singularly with the association of the composition.
- Thought of these focuses will, I accept, lead to an enhanced report that better shows the key ideas and conclusions.
- Generally, this is a reasonable, brief, and elegantly composed original copy.
- The presentation is pertinent and hypothesis based.
